## Worksheet: Exception Handling in Python

1. Write the syntax of exception handling in Python.
2. Name any four common exceptions in Python.
3. What is the use of the finally block?
4. "Every syntax error is an exception but every exception cannot be a syntax error." Justify the statement.
5. What is the purpose of the else block in exception handling?
6. How can you catch multiple exceptions in one block?
7. What is the use of raise in Python?
